

Why use Marp?

Presentation software, rocks!

- Quick and easy to manipulate media
- Attention grabbing transitions

Presentation software, sux!

- Standards? Hahahaha, you're joking, right?
- Keynote is platform specific
- Powerpoint has 9? file formats/versions
- Themes can be hard to build

Some things that make devs :sadpanda:

- Can't (easily) script it
- Can't use source control very effectively
 - Big files with embedded media
 - no diffs
 - might as well use a zipfile
 - Bitkeeper, Mysql, argh
- Hard to publish on the web

Some things that make devs 🦄 🌈

- Can use a text editor
- Can put in git
- Can put into automated workflows

Features

- themes
- PDF generation
- code highlighting
- math typesetting
- EMOJI SUPPORT

Under the hood

- Built on `marp-it`,
- which extends `markdown-it`
- which supports CommonMark spec and more
- Very similar to GitHub Flavored Markdown
- its Javascript all the way down
